

# Carpin

 The Leading Manufacturer of Furniture Glides and Casters

# Carpinnovation

**Innovation is a cornerstone of Carpin Manufacturing. At our state-of-the-art facility we combine metal stamping, plastic injection molding, and other secondary operations to ingeniously solve challenging problems. Leading furniture manufacturers and others rely on Carpin to develop and manufacture breakthrough products that enhance performance and reliability while also delivering outstanding quality and value.**

## Patented Products

Carpin is renowned for developing patent-protected products. Here are just a few of our most notable and innovative product solutions:

### Solo Glide®

The patented SOLO GLIDE system offers the ultimate in flexibility and economy. If a glide ever wears out, you can simply refresh the glide by snapping in a new glide base. Five different glide base materials are available, allowing you to instantly change the glide base to match the flooring surface.

### Smart Glide®

Available in a choice of felt or non-skid rubber base material, the patented SMART GLIDE is a one-size-fits-all solution that encapsulates virtually any marquis style school glide. SMART GLIDE immediately freshens the look of the furniture and improves floor protection. Use of this product also saves time because there is no need to remove the old glide.

### Floor Saver Glide® Base

The patented FLOOR SAVER GLIDE base is manufactured from a special non-marring material that slides smoothly over VCT tile floors: better than nylon, steel, felt, or tennis balls. This cost-saving solution offers improved floor protection against abrasive sand and dirt that can seriously damage VCT tile floors.

### Simple Glide®

The patented SIMPLE GLIDE provides an attractive non-skid rubber base that quickly installs over furniture tubing. SIMPLE GLIDE is offered in a wide variety of colors and diameters to create a designer look while also offering superior flooring surface protection for classroom and cafeteria furniture and other applications.

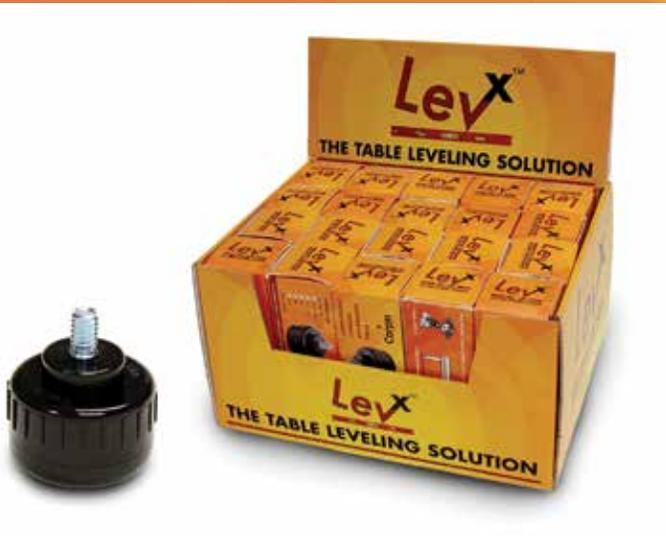

# Glides and Levelers

LEVx is a brand new, patented product that instantly balances and stabilizes wobbly tables.

## Adjustable Glides

Carpin offers an unmatched assortment of adjustable glides that compensate for uneven flooring surfaces and also protect flooring surfaces against scratches, marring and abrasion.

Constructed from heavy-duty steel, thermoplastic polyurethane, and impact-resistant nylon, LEVx glides offer an ideal table leveling solution: perfect for restaurants, bars, clubs, food courts, catering halls, airports, and other public places. No hardware or tools are required, as LEVx glides have metal threads that simply screw into the base of table legs. There are also no messy oils that require added maintenance.

Whenever you move a table, LEVx automatically readjusts to compensate for uneven flooring surfaces, instantly solving the problem of wobbly tables.
